# AGILE PROJECT MANAGEMENT

17 - 18 November 2023

Le Quadri Hotel, UCSI Cheras, Kuala Lumpur

**Trained by  
our  
Master  
Practitioner**

## COURSE OVERVIEW

In project management, one of the most important developments in recent years is the emergence of Agile frameworks in product development.

Scrum is the most widespread practice in Agile project management. This methodology uses time-boxing (work confined in regular, repeatable work cycle) like a sprint (or iteration) in Scrum to allow customers to have a tangible and objective view of a product's progress.

**This course has been designed to help you become Agile the Agile way.**

## WHAT YOU WILL LEARN

- 01** Key concepts of Agile Development, Agile Project Delivery and Agile Project Management.
- 02** Agile frameworks and fundamentals, feedback and retrospectives, change management, scaling agile, Scrum, Kanban, sprints, Lean management
- 03** Differences between Agile and traditional project delivery (other methodologies).

## TESTIMONIAL

*"The idea of break the project to smaller task force and with consistent feedback on progress, task completion and update of progress are useful for my department."*

*Production Manager  
Wilmar Group (Malaysia)*
